

DSS Dental Record Manager Plus - DRM Plus

Overview

One obstacle that limits healthcare technology adoption in the dental industry has been the lack of certified EHRs available that provide diagnostic, therapeutic and decision support functionality specific to the practice of dentistry. That's where DSS Dental Record Manager (DRM) Plus comes in, making it possible for dentists to leverage EHR technology.

Highlights

The DSS Dental Record Manager Plus is an enhanced version of the original Dental Record Manager. It is a Graphical User Interface (GUI) system that communicates with the Veterans Administration's VistA system, allowing single point data entry of patient dental information.

Key Features

- Simultaneous creation of Patient Care Encounter (PCE) and Dental Encounter System (DES) data
- Automatic generation of Text Integration Utility (TIU) notes, if selected, for patient encounters utilizing DSS Clinical Note Templates
- Mapping of CDT codes to default diagnosis codes
- Creates and maintains a VistA Dental Encounter history file
- Displays most patient data in a graphical picture of the patient's mouths
- Provides Online Help
- Enhanced tools for the efficient finalization of Progress Notes.
