## Webinar Overview

OSEHRA's mission is to facilitate, through the use of the best practices in open source software development, the improvement and maintenance of EHR information systems. These systems will be freely available for all medical beneficiaries and – like other successful open source communities – will welcome the contributions of all kinds of developers. OSEHRA simply and powerfully establishes an organized framework for all kinds of companies and creative individuals – users, developers, service providers, researchers, universities and for-profit companies – to communicate, collaborate, and share. The open source ecosystem is a transparent, rapid and safe way to accelerate progress in creating an ever improving, and highly functional EHR for the beneficiaries of VA healthcare, and more broadly, the nation as a whole.
